

Ad Server Solution

AdGlare is a modern cloud-hosted ad server solution for publishers, advertisers and agencies. It comes with free CDN usage and SSL-enabled ad serving domains at a highly competitive price.

5 Data Centers

Reduce network latency by choosing the closest location. AdGlare runs its own privately deployed global Content Delivery Network (CDN), and has ad serving nodes available in Amsterdam, Singapore, Hong Kong, San Francisco and Washington D.C.

Intelligent Routing

Let's say most of your traffic comes from Europe. We'll then route traffic to engines in Amsterdam to target and serve the ad. From that moment, the CDN takes over and serves the creative from an even closer location. That's how AdGlare's infrastructure allows for incredible loading times of <100 ms.

Intuitive & Modern UI

With a modern and highly intuitive user interface, you'll be saving time and money on training your employees how to use the ad server. Interested to see how things look like? A Live Demo is available via <https://try.adglare.net>

Responsive Ads

Right out of the box. All CDN uploaded content is automatically rendered responsive on mobile devices

There's more...

Like geo-targeting up to city level, campaign tiers, native JSON ads, mobile ads, VAST support, YouTube ads, HTML5 Zips, conversion tracking, frequency caps, day-parting, real-time monitoring, external reports and custom ad serving domains. For more information, please visit www.adglare.com or contact us at support@adglare.com.

15-day Trial

Are you interested to take your AdGlare ad server for a test run? We're offering a **fully functional 15-day Trial**. No credit card needed. No obligations. No risk.
